PROFESSIONAL SUMMARY

Backend Software Engineer with 1+ years of experience at KGeN building distributed microservices, blockchain transaction systems, AI-powered data pipelines, and secure OAuth workflows. Proficient in Go, NestJS (TypeScript), Python, AWS, DynamoDB, and Redis. Delivered full-product features across platforms and enterprise AI data annotation systems. Strong foundation in system design, distributed locking, REST API design, and cloud-native infrastructure.

WORK EXPERIENCE

Software Development Engineer 1 – Backend

KGeN (Kratos Gaming Network), Bangalore

June 2025 – Present

- Integrated Sarvam AI batch transcription into a Go-based pre-annotation service, automating AI draft generation for audio annotation and reducing manual annotation turnaround by an estimated 40–60%.
- Designed and delivered the Proof of Expertise (POE) card system end-to-end in Go — 6 REST APIs, S3 theme management, DynamoDB persistence, and OpenAI GPT-4o resume enrichment — launching it as a standalone HumynLabs product.
- Implemented Redis distributed locking across social OAuth (Google, Apple, Discord) flows, eliminating concurrent login race conditions for a platform serving hundreds of thousands of users.
- Built project association service (Go, PostgreSQL) for the HL Annotation Orchestrator, enabling multi-language parallel annotation tracks across 5+ Indian languages with external validation service integration.
- Developed S3 audio ingestion pipeline with multi-speaker support and automatic downstream annotation ingestion, eliminating manual data handoff across 100+ audio datasets.
- Designed daily AWS Glue ETL pipelines syncing 1.5–2 lakh records/day, and created load-testing scripts to simulate high-traffic production scenarios.

Backend Developer Intern

KGeN (Kratos Gaming Network), Bangalore

July 2024 – May 2025

- Migrated LLM resume parser from GCP Cloud Functions to AWS Lambda (Python) with AWS Secrets Manager key management and cold-start optimization, consolidating cloud infrastructure.
- Built the NestJS proxy authentication middleware routing requests across 10+ microservices, implementing JWT/admin strategy, DynamoDB-backed device whitelisting, and scheduled cron cleanup.
- Implemented blockchain transaction infrastructure for KGeN, USDT, and K-Cash tokens — send/swap strategies, rKGeN-to-KGeN EOA swap, gas fee integration, and relayer webhooks for Mudrex, Razorpay, and Smartpay.
- Optimized POG NFT service with Go routine-based concurrency and Redis caching for style data, improving leaderboard query performance by an estimated 30–50%.
- Extended localization system with translation interceptors across quest-list, campaign, and web-banner APIs, enabling multi-language content delivery without API duplication.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, Java, C, C++

Backend: NestJS, Node.js, Express.js, REST APIs, Microservices, Celery (Python)

Databases: DynamoDB, PostgreSQL, MongoDB, MySQL, Redis

Cloud & DevOps: AWS (Lambda, S3, Cognito, Glue, Secrets Manager, SQS/SNS, CodeBuild, EKS), GCP, Docker, Jenkins, ArgoCD

AI & Data: Sarvam AI, OpenAI GPT-4o, Speaker Diarization and Transcription, Resume Parsing, ETL Pipelines

EDUCATION

B.Tech, Computer Science and Engineering

2021 – 2025

Dr. APJ Abdul Kalam Technical University, Lucknow | **CGPA: 8.54 / 10**
